The city of the future.

Visiting Russia one should not forget one of her most wonderful cities - Tyumen. Its ~~rich~~ abundant historical and cultural heritage is truly worth admiring by any sophisticated traveller.

The city of oil and gas.

Tyumen used to fully depend economically on the power of combusted oil and gas. Fortunately, since the mankind had solved the most hazardous problem on Earth (global warming), we have successfully integrated the energy of wind and the Sun in our lives. So, nowadays we are proud to present the museum of the energetics development placed in one of our former gas powerplants.

Work and study.

With the development of world social structures and science our educational system became better than it has ever been: our universities create specialists that are required all over the world. Moreover, we have an outstanding working policy, according to which everyone has an opportunity become useful for our 'obsolete' society.

Glimpses of our daily life

The jewel of Tyumen's crown is its recently built museum of modern art. Its exhibitions present the most precious masterpieces using hologramms that run on the most modern software. You can either spend your free time in the museums or you can travel across Tyumen on such vehicles as levitators, which provide an amazing view of our sightseeings. When hungry, you can visit our central cafeteria: it serves the healthiest food you ever tasted!

To sum up, I would say that everyone is welcome here and no one will leave uncatered.
