SUBJECT: museum using

DATE: 16/02/20

The main theme of this report is the school museum. We have analysed the statistics of its visiting, so now we can talk about problems and recommendations.

School museum is a huge, fascinating building with pictures, sculptures and even practical rooms, which is connected with the school by the stairs. It consists of museums of different kinds: the museum of books to learn ancient literature or the museum of various ways of engagement. The interior is really light and delightful.

We suppose that museum is not popular among students because it is complicated to find information about up-coming events. There is no website or Instagram account of it. Moreover students are struggled with the limitation of the time. They have to do a great amount of tasks and do not have energy for visiting the museum.

We have analyzed everything and want to recommend to make an app for school museum. Students will download it and be in the course of events. Another advice is to make the process of learning more creative. Teachers can make excursions to the museum instead of traditional lessons or to make lessons of reports, which are made using the museum. The level of efficiency in using museum is going high will grow up rapidly, the motivation of the students will enhance, as well.

In conclusion, it is crucial to understand that the progress is running fastly. Every generation should develop new methods using traditional or for education.
