Five empty boxes for ID number

Nowadays less and less people, especially teenagers, do not attend exhibitions and museums. So our school museum is not exception.

The main theme of our museum is technology. There are stands with old calculators and telephones, not so many computers and a giant bookshelf with science-fiction. But we have an issue that the only engagement there is looking at these stands because there are not a guide to tell about the museum and the technology in general. Also there is a lack of space to read books. In addition, the computers are always occupied by little boys playing the games. So there isn't opportunity to study effectively, and students are bored there. That is the reason of decreasing public.

I have discussed the problems our museum has with my classmates, and we have some ways to make this place more attractive and interesting. Firstly, there should be a limitation of time of using computers. Secondly, it's necessary to make a comfortable place for reading with according to the museum's theme decorations. Thirdly, we should find a guide who will involve students in using the museum resources, will educate them and tell about the world of technology. Also we can output some "invite cards" and posters and hand them out.

So, everything what should be done is to make people sure that if they attend the museum, they will enhance their experience, and that it's the best place where they can get new information and knowledge rapidly and with fun.
